
SUPPLIER CREDIT PACKAGE

The specialty chemicals business (the “Business”) operates in Canada as ERCO Worldwide LP, and in the United States under the legal entities ERCO Worldwide Inc., ERCO Worldwide (USA) Inc. and International Dioxide Inc.

Effective April 9th, 2021 Superior Plus Corp (publicly listed on the TSE in Canada under symbol SPB) has sold its specialty chemical business to Birch Hill Equity Partners (“Birch Hill”). Toronto-based Birch Hill is a Canadian mid-market private equity firm with a 26-year history of driving growth in their portfolio companies and delivering returns to the investors.

ERCO Worldwide is the second largest producer of sodium chlorate in North America and the third largest producer of potassium products. It also has the largest base of modern chlorine dioxide generators and related technology for the pulp and paper industry.

The Business manufactures sodium chlorate at four facilities in Canada and one in Valdosta, Georgia, USA. Sodium chlorite is produced at facilities in Buckingham, Quebec and Thunder Bay, Ontario. Chlor-alkali is produced at facilities in Saskatoon, Saskatchewan and Port Edwards, Wisconsin. Potassium based products are produced at the Port Edwards, Wisconsin facility. As the largest worldwide supplier of patented technology for generators, we license, engineer, and oversee the construction of large-scale chlorine dioxide generators for the pulp and paper industry as part of our pulp chemicals business. These generators convert sodium chlorate into chlorine dioxide at pulp mills.

<u>Product (Capacity)</u>	<u>Intermediate Products</u>	<u>Primary End Products</u>
Sodium Chlorate <i>(487,000 metric tons per year)</i>	Chlorine Dioxide	Bleaching agent for pulp production, downstream products include high quality office and coated papers
Chlorine Dioxide Generators	NA	Chlorine dioxide for use in the bleaching of pulp
Sodium Chlorite <i>(10,000 metric tons per year)</i>	Chlorine Dioxide	Antimicrobial agent for municipal water treatment and disinfectant for fresh produce
Chlor Alkali <i>Sodium Hydroxide, Potassium Hydroxide, Chlorine & Hydrochloric Acid (157,000 electrochemical unit (mt))</i>	NA	Bleaching and digesting agent for pulp and paper, widely used in potable water and wastewater treatment programs and in swimming pools Potassium hydroxide is the largest volume potassium chemical for non-fertilizer use, in soaps, detergents and de-icing chemicals
